# Drug List Information

We provide this list of the most commonly prescribed medications for declinable conditions to help you when you're completing applications. New drugs for declinable conditions are regularly introduced. These drugs may be unacceptable even if they aren't included in the list of unacceptable drugs.

If you aren't sure whether or not a medication is unacceptable, please contact the Underwriting Department.

- Your applicant may not be aware of a declinable condition listed on their application. Their prescribed medication may indicate a declinable condition exists.
- Some medications can be prescribed for multiple conditions. If your applicant is prescribed a medication that has multiple uses, you must provide the condition the medication is prescribed for.

The following drug list information is arranged alphabetically by medication.

lower case: generic name

Upper Case: brand name

If there are no conditions listed next to the medication, the medication is always unacceptable. If there are conditions listed next to the medication, the medication is unacceptable when prescribed for any of the listed conditions.

You can always access the latest version of this guide on
